### DEC REMARKS:

01-10-06 Contaminated soil encountered below 2 dyno machines that were removed this winter from a room inside the plant. Each machine had a drain and the affected soil is proximate to those drains. One was powered with gasoline and other with diesel. They have dug out soil around sump pipes. PID readings low near gas machine sump. In 100s near other sump. Engineer is concerned with hitting clay pipes located approx. 1 foot below dug out area. Instructed them to dig out area near diesel machine sump as much as possible, record PID readings and then collect sammles. They will get 24 hour TAT.

01-13-06 Received data from confirmation samples. Closed spill.

## DEC REMARKS:

Spoke to Phyllis. They were doing a water line repair and encountered contaminated soil. This is related to an old spill called in regarding same area. Spill #0308123. Contamination encountered under the East Pad. Pad used to rinse equipment and drums that store petroleum products, mostly cutting fluids. The pad has cracks and over the years, rinsate has contaminated the soil below the pad. Spoke to Regional Engineer and he wants a STIP in place to put them on a schedule. Phyllis indicated that Daimler Chrysler still owns this property.

STIP mailed to Phyllis's attention on 4/13/06.

05/17/06 Al Johnston with Daimler Chrysler (DC) contacted me. They have the analytical data back from the water line repair sampling and he will email to me. Al indicated that DC is reluctant to sign the STIP.

05/23/06 Conducted site visit with Phyllis Prince (NVG), Tom Sullivan (NVG), and Al Johnson. I will seek input from DRB, MJP, and enforcement.

# NYSDEC SPILL REPORT FORM

<b>DEC REGION:</b>	<u>7</u>	<b>SPILL NUMBER:</b>	<u>0600458</u>
<b>SPILL NAME:</b>	<u>NEW PROCESS GEAR</u>	<b>DEC LEAD:</b>	<u>KACAHILL</u>

05/30/06 Discussed situation with DEC enforcement. No apparent violations with the process. Discussed with DRB, and he wants DC to install at least 3 groundwater monitoring wells at edge of pad to determine if groundwater has been affected. If so, STIP or CO will have to be signed by DC. If groundwater is not affected, then DEC will require that pad be cleaned and cracks be sealed. Contacted Phyllis and she would like to have something in writing from DEC regarding repair of the pad.

06/2/06 LVM for Al Johnson.

06/06/06 Al called me back. He will send a letter proposal for well installation and cleaning/sealing of the pad.

06/23/06 Received and approved proposal. Four borings/monitoring wells to be installed.

07/27/06 Concrete repair activities completed on East Pad.

09/12/06 Al contacted me. Fieldwork scheduled for 9/14.

09/14/06 DC installed four soil borings but no wells were installed as no water was encountered. M. Romocki onsite.

12/27/06 Met Tammy Raby with Earth Tech and Emery with NVG. Earth Tech had planned to sample the four wells, but none had J-plugs in them, so sampling will be pushed off. Instructed Tammy to re-purge the wells and then plug.

01/12/07 Earth Tech sampled wells.

04/19/07 Received Investigation report from DC.

05/07/07 Tom Sullivan contacted me and indicated that the pad has been pressure washed.

07/12/07 Requested that DC resample MW-1 due to questionable data qualifier.

08/28/07 MW-1 resampled.

12/3/07 Received final investigation report from DC.

### DEC REMARKS:

Spoke to Phyllis. She has contacted Daimler Chrysler. NPG has hired Op-Tech to scrape up top 6 inches and placing in rollofs. Clay layer below that appears to be clean. They will collect confirmation samples and send to lab. I will attempt to confirm with DC the historical use of the room. Max PID readings were approx. 150 ppm.

01/02/07 Al Johnson, Daimler, contacted me. The soil has been scaped up and 6 confirmation samples collected. The room was used for storage according to his records. I instructed him to have samples run for STARS 8260/8270.

03/22/07 Received soil disposal receipt. Closed spill.

### DEC REMARKS:

Operator punctured a 300 gallon tote containing emulsified coolant with fork lift. Tote was in a staged tractor trailer bed. Product leaked from seam in trailer onto loading bay pad. Op-Tech called out by NPG. Product was recovered, trailer was rinsed and pad cleaned. Less then one gallon of product was released to a storm drain on the pad that discharges to NPG storm water retention pond.

----------	-----------	----------	-------	--------	-------------	-----------	---------------

### **DEC REMARKS:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "CTR"  
 Atlantic Rigging was driving a crane at the site when a hydraulic line broke. The oil was sprayed over a paved area.  
 Atlantic Rigging personell partially cleaned up area and pushed remainder into a near by stormdrain. Atlantic Rigging  
 did not report this spill to NVG or DEC. NVG notified us next day after they found and investigated. Estimated loss  
 was 60 gal. The storm drain contained silt and debri which adheared to the oil. The invert pipe in the stormdrain was  
 blocked by this debri allowing the spill to end here. THe downstream storm drain was checked and no oil was  
 present. NVG hired a contractor to clean both stormdrains that evening.
